HOMEWORK ASSIGNMENT: WEEK 4

Assignment 01:

1. Create a managed table called store_details with schema → (store_location, store_description, store_type)

2. Load the file store_details_file into this table, query and see if you are able to see the data properly

3. Create a managed table called store_sales with schema:-(store_location, operation_date, tot_sales)

4. Load the file store_txns_file into this table, query and see if you are able to see the data properly

5. Now Create an external table called stores_report by joining store_details and store_sales based on store_location column and verify if the results look good
